

# Machine Learning Use case

## Main UI

I want to

Drop box:

- Predict a value
- Make a recommendation
- Classify an object (binary classification)
- Classify an object (multiclass classification)

Description: Predict a value from the machine learning model, such as house price, income, cost etc.

## Predict a value UI

I want to

Drop box:

- Predict using exist model(s)
- Create new model(s)

Description: Predict a value from the machine learning model, such as house price, income, cost etc.

## Predict using exist model(s) UI

### Select one or more exist models

user ID	project ID	create time	model type	predict columne	model name	model_accuracy	recomended stars	Please select
0001	001	2021-12-06	value prediction	price	Linear Regression	mean_absolute_error=125636 root_mean_squared_error=195381 median_absolute_error=87607 r2=0.987	**	<input checked="" type="checkbox"/>
0001	001	2021-12-06	value prediction	price	Decision Tree Regression	mean_absolute_error=96879 root_mean_squared_error=172768 median_absolute_error=55897 r2=0.89	***	<input checked="" type="checkbox"/>
0001	001	2021-12-06	value prediction	price	Boosted Decision Tree Regression	mean_absolute_error=73303 root_mean_squared_error=125287 median_absolute_error=47525.0 r2=0.76	*****	<input checked="" type="checkbox"/>
0001	002	2021-12-06	value prediction	price	Linear Regression	mean_absolute_error=185625 root_mean_squared_error=165354 median_absolute_error=97501 r2=1.257	*	<input type="checkbox"/>
0001	002	2021-12-06	value prediction	price	Decision Tree Regression	mean_absolute_error=106567 root_mean_squared_error=199788 median_absolute_error=86546 r2=0.957	**	<input type="checkbox"/>
0001	002	2021-12-06	value prediction	price	Boosted Decision Tree Regression	mean_absolute_error=88624 root_mean_squared_error=240258 median_absolute_error=65524 r2=0.92	**	<input type="checkbox"/>

Button: Confirm

\* table location: s3://dev-demo-land-area/autoML/test\_prepare/regression\_exist\_models.csv

Predict using exist model(s) UI

House data view

TO use the selected model(s), your source should look like:

## Recommendation UI

I want to

Drop box:

- Recommend products using exist model(s)
- Create new recommendation model(s)

Description: Create new recommendation model(s). The business scenario includes product recommendation based on historical transactions, other's recommendation and customer profiling etc

## Recommendation UI

Select one or multi algorithms to build model(s):

Button: Confirm

- Factorization Machine Model
- Logistic Regression Model
- Automatic Feature Interaction Model

## Create new recommendation model(s) UI

TO create recommendation models, you need user, item and user-item interaction datasets.

Select or create a **user data**:

Drop box:

Your source preview (100 rows):

	CustomerKey	GeographyKey	MaritalStatus	Gender	YearlyIncome	TotalChildren	NumberChildrenAtHome	HouseOwnerFlag	NumberCarsOwned
1	21626	648	M	F	70000	5	5	1	2
2	21627	302	M	F	70000	5	5	1	2
3	21628	612	S	F	40000	0	0	0	1
4	21629	52	S	M	50000	3	3	0	1

Button: Confirm

Select or create an **item data**:

Drop box:

Button: Confirm

Select or create a **user-item**  
interaction data:

Drop box:

Button: Confirm

\*recommendation data: s3://dev-demo-land-area/autoML/test\_prepare/user\_data.csv

\*recommendation data: s3://dev-demo-land-area/autoML/test\_prepare/item\_data.csv

\*recommendation data: s3://dev-demo-land-area/autoML/test\_prepare/user\_item\_interaction.csv

## Create new recommendation model(s) UI

Select or create a user-item  
interaction data:

Drop box:

Button: Confirm

CustomerKey	ProductKey	SalesTerritoryKey	OrderQuantity	SalesAmount
13917	536	4	1	29.99
13917	528	4	1	4.99
13917	217	4	1	34.99
12164	359	4	1	2294.99

28948	214	9	1	34.99

Button: Submit job

Click to create json file

\*json file saved: s3://dev-demo-land-area/autoML/requests/history/recommendation\_0001\_001\_Training\_20211206.json

\* copy json file to: s3://dev-demo-land-area/autoML/requests/queue/

## Main UI

I want to

Drop box:

- Predict a value
- Make a recommendation
- Classify an object (binary classification)
- Classify an object (multiclass classification)

Description: Classify a object usually is suitable to identify which group a object belongs to. The typical scenario includes home loan default analysis, fraud detection, potential customer or churn customer etc

## Classification UI

I want to

Drop box:

- Classify an object using exist model(s)
- Create new classification model(s)

Description: Classify a object usually is suitable to identify which group a object belongs to. The typical scenario includes home loan default analysis, fraud detection, potential customer or churn customer etc

## Classify an object using exist model(s) UI

## Classification UI

I want to

Drop box:

- Classify an object using exist model(s)
- Create new classification model(s)

Description: Classify a object usually is suitable to identify which group a object belongs to. The typical scenario includes home loan default analysis, fraud detection, potential customer or churn customer etc

## Classification UI

Select one or multi algorithms to build model(s):

Button: Confirm

- Logistic Regression Classifier
- KNeighbors Classifier
- Support Vector Machine Classifier
- Naive Bayes Classifier
- Decision Tree Classifier
- Random Forest Classifier
- Gradient Boosting Classifier

Create new model(s)

Select or Create a Source:

Drop box:

Button: Confirm

Your source should look like:

Column1	column2	column3	column4	column5	column6	column7	.....	columnN	column_classes
---------	---------	---------	---------	---------	---------	---------	-------	---------	----------------

Create new model(s)

Your source preview (1000 rows):

Button: Confirm

Column1	column2	column3	column4	column5	column6	column7	.....	columnN	Predict Value

Button: Submit job

Click to create json file

\*House data(show different rows): s3://dev-demo-land-area/autoML/test\_prepare/body\_performance\_healthy.csv

# Microsoft Azure Machine Learning Algorithm Cheat Sheet

This cheat sheet helps you choose the best machine learning algorithm for your predictive analytics solution. Your decision is driven by both the nature of your data and the goal you want to achieve with your data.

## Main UI

I want to

Drop box:

- Predict a value
- Make a recommendation
- Classify a object

Button: Confirm

Description: Predict a value from the machine learning model, such as house price, income, cost etc.

Predict a value UI

Select or Create a Source:

Drop box:

Button: Confirm

Your source should look like:

Column1	column2	column3	column4	column5	column6	column7	.....	columnN	Predict Value
---------	---------	---------	---------	---------	---------	---------	-------	---------	---------------

Or create a dataset via our data integration tool

Button: Confirm

Or use notebook to create your own experiment

Button: Confirm

## Predict a value UI

Your source preview (1000 rows):

Button: Confirm

[illegible]

Predict a value UI

We have done:

Algorithm

1, 2, 3  
Algorithm 1 feature, validation scores, curves...

Algorithm 2 feature, validation scores, curves...

We would recommend:

Algorithm X because the following reason....

Click here to download your trained model or deploy

Button: Confirm

## Predict a value UI - test your model

Select or Create a Source:  
Or fill the form

Drop box:

Button: Confirm

[illegible]

## Test result

[illegible]

Predict a value UI

We have done:

Algorithm

1, 2, 3  
Algorithm 1 feature, validation scores, curves...

Algorithm 2 feature, validation scores, curves...

We would recommend:

Algorithm X because the following reason....

Click here to download your trained model or deploy

Button: Confirm
